

GOOSE POND  
Dedham Twp., Hancock Co.  
U.S.G.S. Orland, Me.

Fishes

Salmon	Chain pickerel
Brook trout (squaretail)	Smelt
Smallmouth bass	Eel
White perch	White sucker
Yellow perch	Minnnows
	Sunfish

Physical Characteristics

Area - 202 acres

Temperatures

Maximum depth - 32 feet

Surface - 75° F.

28 feet - 49° F.

Principal Fishery: Smallmouth bass, white perch, and pickerel

Goose Pond contains a moderate volume of water suitable for supporting cold water species during the summer. An experimental salmon stocking program from 1966 through 1970 was unsuccessful in establishing salmon fishing. Salmon stocking has been discontinued.

There is no public access although access via an old dirt road is possible under difficult conditions.

Goose Pond provides suitable habitat for warm water fish. Management should be for those species presently inhabiting the pond.

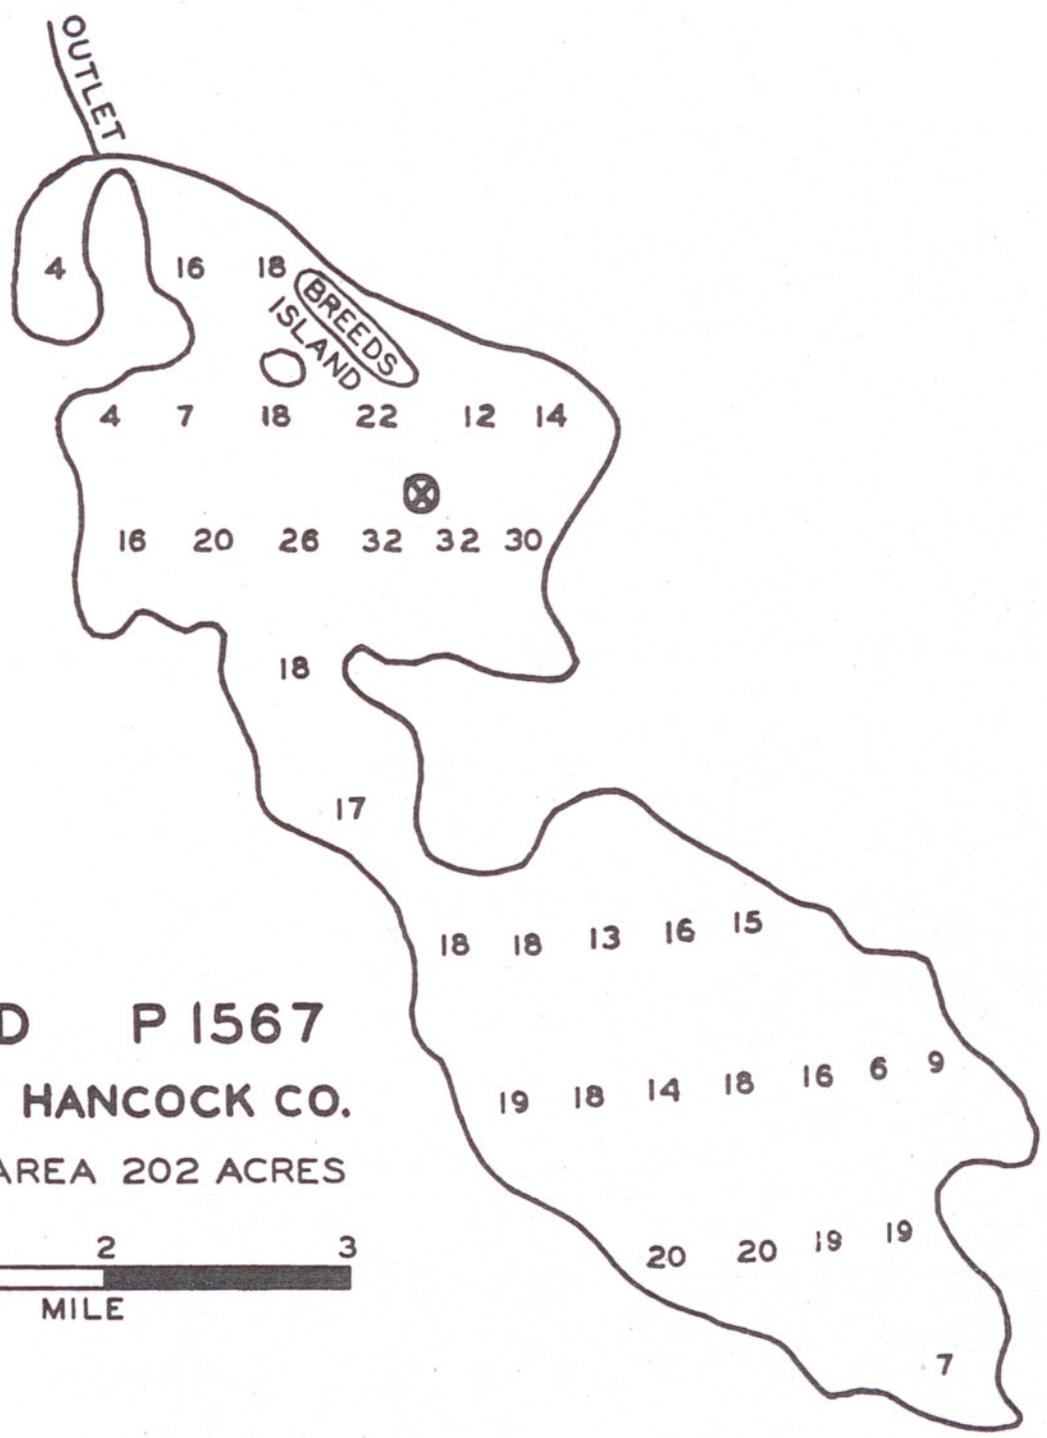

An occasional salmon or brook trout produced in the inlet may be caught by anglers fishing this pond.

Surveyed - August, 1942
